

Customer: Landschafts- und Gartenbau Stackelitz GmbH

25 vehicles guaranteed on the job

The Company

The Landschafts- und Gartenbau Stackelitz GmbH company, with its 5 locations in Stackelitz, Dessau, Halle, Leipzig and Wittenberg, more than 100 employees and a combined turnover of more than 10 million Euro is one of the largest in the industry in the new federal republic states. The fleet accordingly includes more than 100 construction machines, lifting equipment, transporters and special purpose vehicles.

The Assignment

When using the equipment especially in road traffic, there were cases when there was damage and supposed accidents that were difficult to explain. Until now it was almost impossible, as far as the operating times and locations were concerned, to check the work of employees, which made the explanation and provision of evidence even more difficult. Checking the employee on the one hand, and on the other hand providing records to others were decisive reasons for choosing a GPS-based solution.

The Solution

The installation of the GPS systems in all road vehicles has since solved this problem very efficiently. The data can be used both to check the working times of the employees and for accounting. This has increased the operating efficiency. Add to this the fact that if there is an accident, the location and time of operation is now continuously documented. Without the vehicle having to go to the company headquarters reports are sent, automatically to the fleet management software and are available at the end of the month. The system can thus provide a continuous record of the travelling times and stops for the complete fleet.

Vehicle fleet: 100 trucks

TomTom WORK
Fleet management

- Accurate, mobile working time and location registration records in case of accidents, etc.
- Software solution installed at customer locations
- Automated reporting
- Checking of working times of staff and accounting
